Safe Software

Dear Hiring Manager,

I am a third-year Software Systems student from Simon Fraser University and highly interested in your Full Stack Software Developer Internship program. Apart from the creative environment at Safe Software this program has deeply attracted me with challenging yet rewarding job scope. I believe my academic strength and passion for creative solutions will be a positive addition to your team and support your organization's roles.

I had a one semester coop term as a QA Tester where I gained a good understanding of software development techniques, improved the quality of my coding skills and became more confident in testing.

Academically, my outstanding result, especially in mathematics and computer science courses, proved strong technical and analytical aptitude. On top of that, a taken Minor in Design enhanced my understanding of the front-end component of the software development process.

Besides, I completed several hands-on projects where I could apply my knowledge to real-life projects. I am in the process of developing a cross-platform mobile app using Flutter for a food company that will have use of the app I am developing. Moreover, I have developed two android mobile applications, one of which was chosen the best among five similar applications. Additionally, I have created a web game from which I gained knowledge in HTML, CSS, and JavaScript and became more confident in using those languages.

In case if my skill set is not quite the right fit for what you are currently targeting, I have a strong learning ability and together with communication and entrepreneur skills, I am confident that I will make a positive contribution to your company.

My resume is enclosed for your review. Thank you in advance for your time and consideration. I would appreciate an interview opportunity and look forward to hearing from you soon.

Sincerely,

Denys Ovsienko
